

Biomagnetism Study

Be a part of an important Biomagnetism Research Study

- Are you at least 5 months pregnant (18 weeks or more)?
- Are you 18 years of age or older?
- Is your body free of large metal plates, screws, or devices such as a pacemaker?

If you answered YES to these questions you may be eligible to participate in a biomagnetism research study.

The University of Wisconsin Physics Department, the Medical Physics Biomagnetism Lab, and the Medical College of Wisconsin are investigating the use of a new type of magnetometer to measure magnetic fields produced by unborn babies. The instrument is entirely passive and poses minimal safety or health risk to you or your baby. No medications will be given.

You may be asked to participate in several visits to the Wisconsin Institutes for Medical Research. You will be compensated for your time.
